

The BIOS Lab-on-a-Chip Group and MESA⁺ Institute for Nanotechnology at the University of Twente is organizing the first international workshop on label-free biosensing. The workshop content is dedicated to label-free sensing of biomolecular interactions where different methods and aspects of label-free sensing will be discussed by a wide range of experts. Key topics related to label-free biosensing, such as sensors, surface chemistry, sample fluidics and analysis of kinetic parameters, such as rate-association and dissociation and equilibrium constants that are related to the biomolecular interaction between the immobilized ligand and analyte in the sample serum will be discussed throughout the workshop. For more information please see the conference website: www.lfb2008.com

**1st International Workshop on Label-free
Biosensing (LFB 2008).**
